

Course Title: Comparative Substantive Criminal Law
Course Code: LLM-E-302

Course Objective: The course on evidentiary issues relating to the use of modern technology and forensic in criminal trials primarily focuses on the use and importance of modern technology in law enforcement. In this course, students of the LLM programme shall be made familiar with the concept of forensics, its various conceptual dimensions and principles. The students shall also be taught various kinds of forensic evidence like post mortem, blood, fingerprints, saliva, DNA profiling, ballistics, and their admissibility and evidentiary values. Information Technology Act, 2000 and its various concepts shall also be imparted along with forensic science and evidence.

Course Outcome: On successful completion of this course, students are expected to be able to:

1. Demonstrate forensic science basics and their role in the justice delivery system.
2. Understand the importance of modern-day technology and its role in civil and criminal laws.
3. Evaluate various evidence of forensic science, like DNA Profiling, Post mortem, blood, and fingerprints.
4. Appreciate the judiciary's role in applying the provisions of the Information Technology Act.
